Creator: Agnello, Sam A.

Extent: 2 record storage boxes, 300 items, 1 linear feet

Processed By:

Date Completed:

Encoded By:

Historical Note

Sam A. Agnello was a native of Jamestown, N.Y. He received his A.B. degree from Duke University in 1939 and joined the staff of Duke University in 1941. He served as an administrative assistant in the Department of Anatomy and later was appointed medical television coordinator.

A television system was first installed at Duke University in 1960 in the Department of Anatomy with seven single-channel systems. The programs for first- and second-year students included demonstrations of physiologic experiments. Broadcasts were used to help students see and hear research works in progress. As of 1964, television projectors could be used in twenty-one locations throughout the medical center. Agnello worked closely with Joseph Markee and F.D. McFalls in the development of television as a local tool for teaching and research. Some projects were funded by the Duke Endowment and the Mary Duke Biddle Foundation.

In 1965, Agnello was named director of the Division of Audiovisual Education, an entity of the School of Medicine. The division was made up of three sections: Medical Art, Medical Photography, and Medical Television. The division's aims were to provide the Duke community with professional cinematography capabilities, custom color slide processing, and continuing education, user instruction, and training in medical photography, art, and television.

Agnello held offices in the Council on Medical Television, Inc., the Southeast Chapter of the Biological Photographic Association and co-authored several articles on the use of television for medical teaching and research.

Collection Overview

Professional papers of Sam A. Agnello. Proposals and reports include correspondence with Joseph E. Markee and William G. Anlyan.
